                                                                                                                                                                                                                         The sequence represents a cDNA which encodes the human caspase CC recruitment domain 12 (CARD-12) polypeptide. CARD domains are found in a CC number of proteins that transmit signals that activate apoptosis and CC number of proteins that transmit signals that activate apoptosis and CC inflammatory pathways in response to stress and other stimuli. Therefore, CC CARD-12 and its corresponding nucleic acid may be used in treatment and CC diagnosis of patients suffering from disorders associated with an CC abnormal level (an increase or a decrease) of apoptotic cell death or CC abnormal level (an increase or a decrease) of apoptotic cell death or CC cancer, viral infections (e.g. caused by poxviruses, adenoviruses), CC autoimmine disorders (e.g. systemic lupus crythematosis, arthritis), CC neurological disorders (e.g. Alzheimer's disease, amyotrophic lateral CC infarction, stroke), inflammatory and immune system disorders (e.g. CC crohn's disease, insulin-dependent diabetes, contact dermatitis, CC psoriasis, graft rejection), bacterial infections (e.g. tuberculosis, CC lepromatous leprosy), ischaemic and hypoxic brain damage, acute bacterial CC meningitis and liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                   encoding

```
cc containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain CC from it, and the polynuclectides encoding them. Also included are a cc recombinant vector comprising the polynuclectide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian CC and insect cells) and an anti-CARD antibody. The CARD-containing cp polypeptide and CARD-encoding nucleic acid are useful for treating a CC pathology characterised by abnormal cell proliferation (e.g. cancer), cc abnormal cell death (apoptosis), autoimmune diseases or inflammation. In CC particular, the polypeptide and nucleic acid are useful for treating cc pathology the proliferation in arteries following balloon angioplasty commuscle cell proliferation in arteries following balloon angioplasty communication arthritis, lupus, Schrogen's syndrome, Crohn's disease, communication, heart failure, communication and disease, stroke, myocardial infarction, heart failure, immunication of disease, stroke, myocardial infarction, heart failure, communication of disease (e.g. Parkinson's disease or Alzheimer's communication of disease (e.g. human containing protein.

                                                                                                                                                                                                                                                            proteins from a variety of organisms, including human, dog, cat, ho cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a of the invention.
